

Executive & Business Review

QBR, Semi-Annual Review, and Health Digest Formats

Purpose

One underlying discipline — review, decide, assign an owner, set a date — delivered at three different intensities depending on what the tier's revenue can actually support.

Format by Tier

Tier	Format	Cadence	Who's In the Room
Tier 1	Formal QBR	Quarterly	Exec sponsor, named CSM, customer executive stakeholders
Tier 2	Business review	Semi-annual	Named CSM, customer primary stakeholders
Tier 3	Health digest	Quarterly, automated	No live meeting by default — escalates to a call only if the digest crosses a risk threshold

Tier 1 — Formal QBR Structure

1. **Outcomes review** — progress against goals set last quarter
2. **Platform health & adoption metrics** — usage trend, feature adoption depth
3. **Roadmap alignment** — customer priorities vs. product direction
4. **Risk review** — anything open, logged with an owner and a due date
5. **Expansion conversation** — only if the foundation is solid; a QBR with open risks is the wrong moment to raise expansion

The rule that governs every session: it ends with a decision, an owner, and a due date — never just a status update. If someone leaves the room without knowing what they own and when it's due, the review didn't accomplish its purpose.

Tier 2 — Semi-Annual Business Review

Lighter than Tier 1's full QBR: usage trend, a support summary, and one or two priority items for the next period. No exec sponsor required unless a risk or expansion signal specifically calls for one.

Tier 3 — Automated Health Digest

Quarterly digest covering usage, tickets, and adoption, generated and sent automatically — no live meeting by default. It escalates to a human call only if the digest crosses a defined risk threshold. This is the version that scales without consuming CSM time on accounts that don't need a live conversation that quarter.

What Ties the Three Formats Together

- Every format ends in the same place: a decision, an owner, a date
- The format's weight is a direct function of the tier's revenue — not a subjective call about how much attention an account "feels" like it needs
- Risk items surfaced in any format feed directly into the Health & Risk Playbook's trigger system, so nothing raised in a review gets lost between meetings

Artifacts

- QBR deck template (Tier 1)
- Semi-annual review template (Tier 2)
- Automated health digest template and escalation threshold rules (Tier 3)
- Standing decision/owner/due-date action log, used across all three formats
